beta	**0.5**	**1**	**2**	**5**
N=2	1.46%	1.26%	1.01%	0.60%
N=3	0.10%	0.05%	0.02%	0.02%
N=5	0.01%	0.01%	0.01%	0.01%
N=8	0.01%	0.01%	0.01%	0.00%

Table 1: Relative absolute difference for different n and β on the option price compared to $n = 10$, with $Y_0 = D, h_0 = 1, \alpha = 0.1, T_0 = 2$, strike $K = 2$ and the time to maturity $\vartheta = 1$. Pure jump case.
