

Table 1: Fixed effects regression results with t (i.e., “time”) included as a regressor. The table contains results for multiple model specifications, F1T to F4T, and multiple dependent variables. Columns include model ID, the number of observations n used to fit each model, goodness of fit R^2 (within), F-statistic for poolability, and coefficient estimates (standard errors in parentheses). We use * to denote significance at the 0.05 p -level; ** at the 0.01 p -level, and *** at the 0.001 p -level.
