

Table 1: Most frequent candidates measured during the run for $N = 15$ with $a = 2$.

Block	Block Size (m_i)	Top Candidates (bitstring: empirical probability)
1	3	100 (29.0%), 110 (29.0%), 000 (24.0%), 010 (18.0%)
2	3	000 (100.0%)
