white

Table 1: Pooled regression results with t (i.e., "time") as a regressor. The table contains results for multiple model specifications, numbered P1T to P4T, and multiple dependent variables as explained in Section **??**. Columns include model ID, the number of observations n used to fit each model, goodness of fit R^2, and coefficient estimates (standard errors in parentheses). We use * to denote significance at the 0.05 p-level; ** at the 0.01 p-level; and *** at the 0.001 p-level.
