Table 1: Most frequent candidates measured during the run for $N = 15$ with $a = 2$.

Block	Block Size (m_i)	Top Candidates (bitstring: empirical probability)
1	3	110 (29.0%), 010 (27.0%)
2	4	1000 (51.0%), 0000 (49.0%)
3	4	0000 (100.0%)
4	5	00000 (100.0%)
